Agriculture & Natural Resources

The COS Agriculture Division believes in the value of hands-on education, opportunity for preparing for the industry and the importance of a well-rounded student experience. The Ag Division stresses quality teaching and learning through formal classroom lecture/discussion methods as well as plenty of hands-on “learn-by-doing” in our well-equipped laboratory facilities including livestock and equine barns, a reproductive physiology lab, multiple science labs, nursery areas for plant propagation, greenhouses, shade structures and a 320-acre farming operation. The Agriculture Division has a strong industry connections and support and has some of the most active groups of students on the COS campus with multiple student-led organizations, field trips to industry, regional competitions and many more opportunities.

22 degrees/certificates

“

Without the COS Agriculture Program, I would not be on the path I am today. It helped guide me towards the career I’ve always dreamed of having and helped me develop the skills and knowledge it takes not only to be a successful businessman, but a standout member of the community as well.

”

– KYLE GRIFFITH,
COS AG STUDENT

The Agriculture Industry employs more people than any other industry in our region. One in five jobs in our region is connected to Agriculture.*
