Information Technology

The Information Communication Technology (ICT) program offers courses in network communication technology, operating systems and infrastructure. This program will help students pursue a career in which they will have the ability to match technology capabilities with business operational needs. This program trains students for entry-level network support positions as well as a foundation for various industry certifications (A+, MCSA and CCNA).

" The goal of the ICT Program is to have students work in industry while completing their education. This process allows them to see how theory is put into practice; while gaining valuable experience which will better their chances in locking down a future full-time position long-term in the industry. "

– RAMYAR ALAVI-MOGHADDAM, COS INFORMATION COMMUNICATION TECHNOLOGY PROFESSOR

Nearly one in 20 private sector jobs are in **Information Communication Technology.** This industry will continue to produce more new jobs in our region and beyond.
